GARDEN PREMIUM SYSTEM

PURATANK

SYSTEM:

The Garden Premium System has all the features of the Economy System but adds several extras to increase usability and efficiency. Among other accessories the Garden Premium comes with a calmed inlet and a floating intake which means the water in the tank will stay fresher and cleaner than in the Economy System. The Premium also has a more powerful pump when compared to the economy system so will last longer and be able to cope with more demanding applications.

COMPONENTS:

- 1 P Series pumps are stainless steel pumps with plastic coverings and are suitable for domestic water systems, rainwater harvesting, tanks, surface irrigation and tank transfer. They combine with a float switch to help protect the pump from running dry.
- 2 The rodent guard protects the internal water from rodents and large debris which could contaminate the water entering via the overflow.
- 3 The PF filter is designed with a level drop, this along with its very smooth surface structure allows excess dirt to be rinsed straight through to the overflow. The filter cartridge mesh is stainless steel within plastic housing and is self-cleaning, though regular inspection is recommended.
- 4 The calmed inlet removes the kinetic energy from the water as it enters the tank. This means that as the water enters it doesn't stir up the contents of the tank.
- 5 The turret set provides the connection between the pump and the pipework leading to the various external applications. They are made from a flexible plastic so can easily deal with the pressurised water coming from the pump.
- 6 The pump lifting chain aids in servicing the pump as it allows the pump to be easily pulled up towards the top of the tank.
- 7 A floating intake ensures that no water from either the bottom or the surface of the tank is taken in. Meaning only clean water passes through the system and is pumped into the household.

ADDITIONAL SPECIFICATIONS

- Service duct
- Delivery hose (Options available)
- Tanks sold separately

POPULAR USE:

- Garden irrigation
- Cleaning the car
- Washing windows
- Power washing drive/patio
- Outside tap and hosepipe
